

Best practices

PRINCE has a proven track record for turnarounds, shutdowns, relocations, renovations and modifications. We have already worked for organizations such as Shell, NAM, Hexion, Teijin and Valero. From all the resulting best practices, we have developed generically applicable functionalities which we further develop into custom-made solutions, totally focused on responding more rapidly to your project management demands.

Why choose Stork's project management system **PRINCE**?

- Multidisciplinary business process support
- Full traceability
- Standardized working method
- Reliable interfaces
- Central assurance of lessons learned
- No surprises!

Why choose Stork?

- knowledge of the world of plant owners
- familiarity with conceptual/basic engineering and detailed design
- comprehensive service
- unique management support through **PRINCE**
- professionals to get the job done!
- risk management
- long-term collaboration guarantees for continuous optimization of projects
- cost savings

Supporting your ambitions!

Stork Asset Management Solutions is open to challenges and will find the best approach with you. Our aim is to achieve your ambitions.

Perform with **PRINCE**!

Proven Business Process Solution

A Stork system that turns the seemingly impossible into reality!
Perform with PRINCE!

Finding the right IT system to support all your multidisciplinary activities may seem impossible. But Stork Asset Management Solutions has developed a system that turns the seemingly impossible into reality! **PRINCE** gives you an integrated workflow and business process management system for controlled execution of multidisciplinary projects and modifications.

This originally piping-oriented material management system has been developed over the last 30 years into a reliable, multidisciplinary project logistics management system. It is accessible worldwide, and suited for Turnarounds, Revamps and Greenfield projects. Stork's integrated approach in working towards optimal production processes proves its value in these projects.

Managed Services

Placing the responsibility for a plant relocation or a shutdown outside your own organization without losing control? Stork Asset Management Solutions provides an all-in solution with Managed Services. As a comprehensive service provider, we manage technical services, in whole or in part, providing excellent Reliability Centered Maintenance as well as Maintenance Management. **PRINCE** supports the execution of relocations and turnarounds. Working closely with you, we aim for optimized relocations, shutdowns and project management, with the focus on achieving (long-term) improvements.

Advice & Implementation

We offer a critical, independent and professional viewpoint, and we apply our knowledge and experience to implement structural improvements, working in close partnership with you.

PRINCE's disciplines:

- Piping (prefab & field)
- Mechanical
- Non-Destructive Examinations (NDE)
- Post-Weld Heat Treatment (PWHT)
- Electrical & Instrumentation
- Steel Structures
- Painting, Insulation, Scaffolding
- Etc.

Supporting your business processes

PRINCE meets your goals in the domain of the integrated cost, quality and progress control of working processes. Supporting your processes with this system will result in an optimal Total Cost of Ownership (TCO).

Scope development

In our industry, scope definition and calculation of the required man-hours and costs are daily business. As the Field Engineer defines the tasks and material lists, **PRINCE** automatically generates the required man-hours and costs – a solution that saves time and money for all those involved.

Full traceability

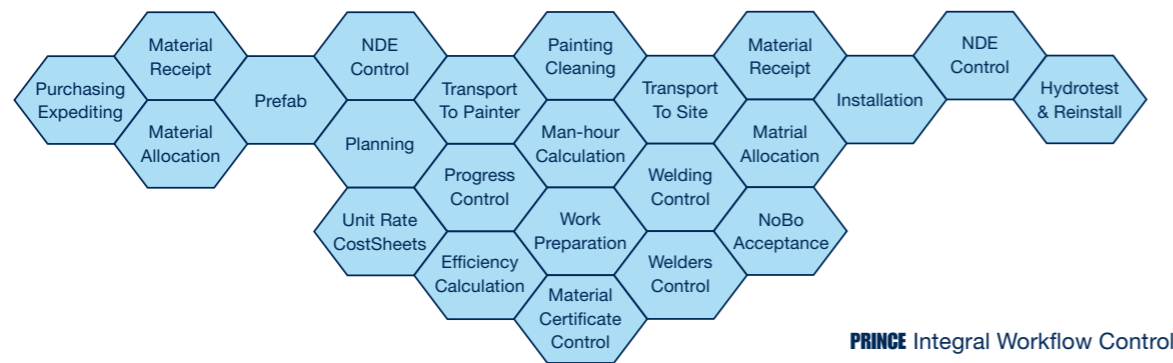

PRINCE is unique in its extensive traceability & reporting functionalities. It records all material and welder certificates, procedures, bolt-ups, connections, non-destructive examinations (NDE), PWHT etc.

Interfaces

PRINCE interfaces with SAP, most engineering software such as PDMS, PDS and AutoCAD, and planning tools such as Primavera. The system can import hundreds of isometrics per day from 3D engineering CAD systems, including all individual line items and connections. **PRINCE** will calculate the scope hours and costs (including painting, insulation and material) according to your norm settings on the same day.

Professionals

We have specialized professionals at your disposal for the execution of projects. The most dedicated team will be put together for you. With this mix of expertise and competencies, plus support from **PRINCE**, we work towards the best possible project management and production processes

PRINCE fully integrates & supports the following business processes:

- Estimating / costing
- Scoping and detailed field engineering
- Material & certificate registration
- Execution control
- Progress registration and reporting
- Quality Assurance & control
- Commissioning
- Document control
