

Thinking and doing in Asset Integrity Management

Reliable • Stand-by • Sustainable

**The power to serve
your business**

Power. That's Stork Technical Services

We think and do. Just like you.

Oil & Gas

Power

Chemical

World-class performance, a shared goal

As different as they are, our customers have one thing in common: a desire to continuously improve the performance of their installations, production lines and equipment. That is why they turn to Stork Technical Services for support. We focus our efforts on supporting companies in the Energy, Oil & Gas and Chemical industries anywhere in the world. We concentrate on the integrity of installations, which entails not only thinking, but doing. Our highly educated and experienced specialists provide on-site maintenance as well as the development and implementation of strategic and profitable improvements.

Our strategy is as simple as it is unique. We work together closely with our customers on asset integrity management, the focus of which is on safety, reliability and productivity in the Energy, Oil & Gas and Chemical industries. Our business model ensures added value and allows us to offer:

- Full dedication to customers' goals
- Flexibility to meet customers' needs
- A true collaborative approach to our work
- The best workforce within a variety of technical disciplines
- Uncompromising safety
- Sustainability
- Integrity and reliability
- Best of class asset optimization and methods
- Understanding of customers' values and culture

"The strength of Stork Technical Services lies in the fact that we take the time and effort to learn everything there is to know about specific sectors and our customers within those sectors. It is an approach that works.

Our customers trust us, with respect to both our ideas on strategic and policy levels and the manner in which we translate those ideas into concrete actions. Thinking and doing is what Stork is all about."

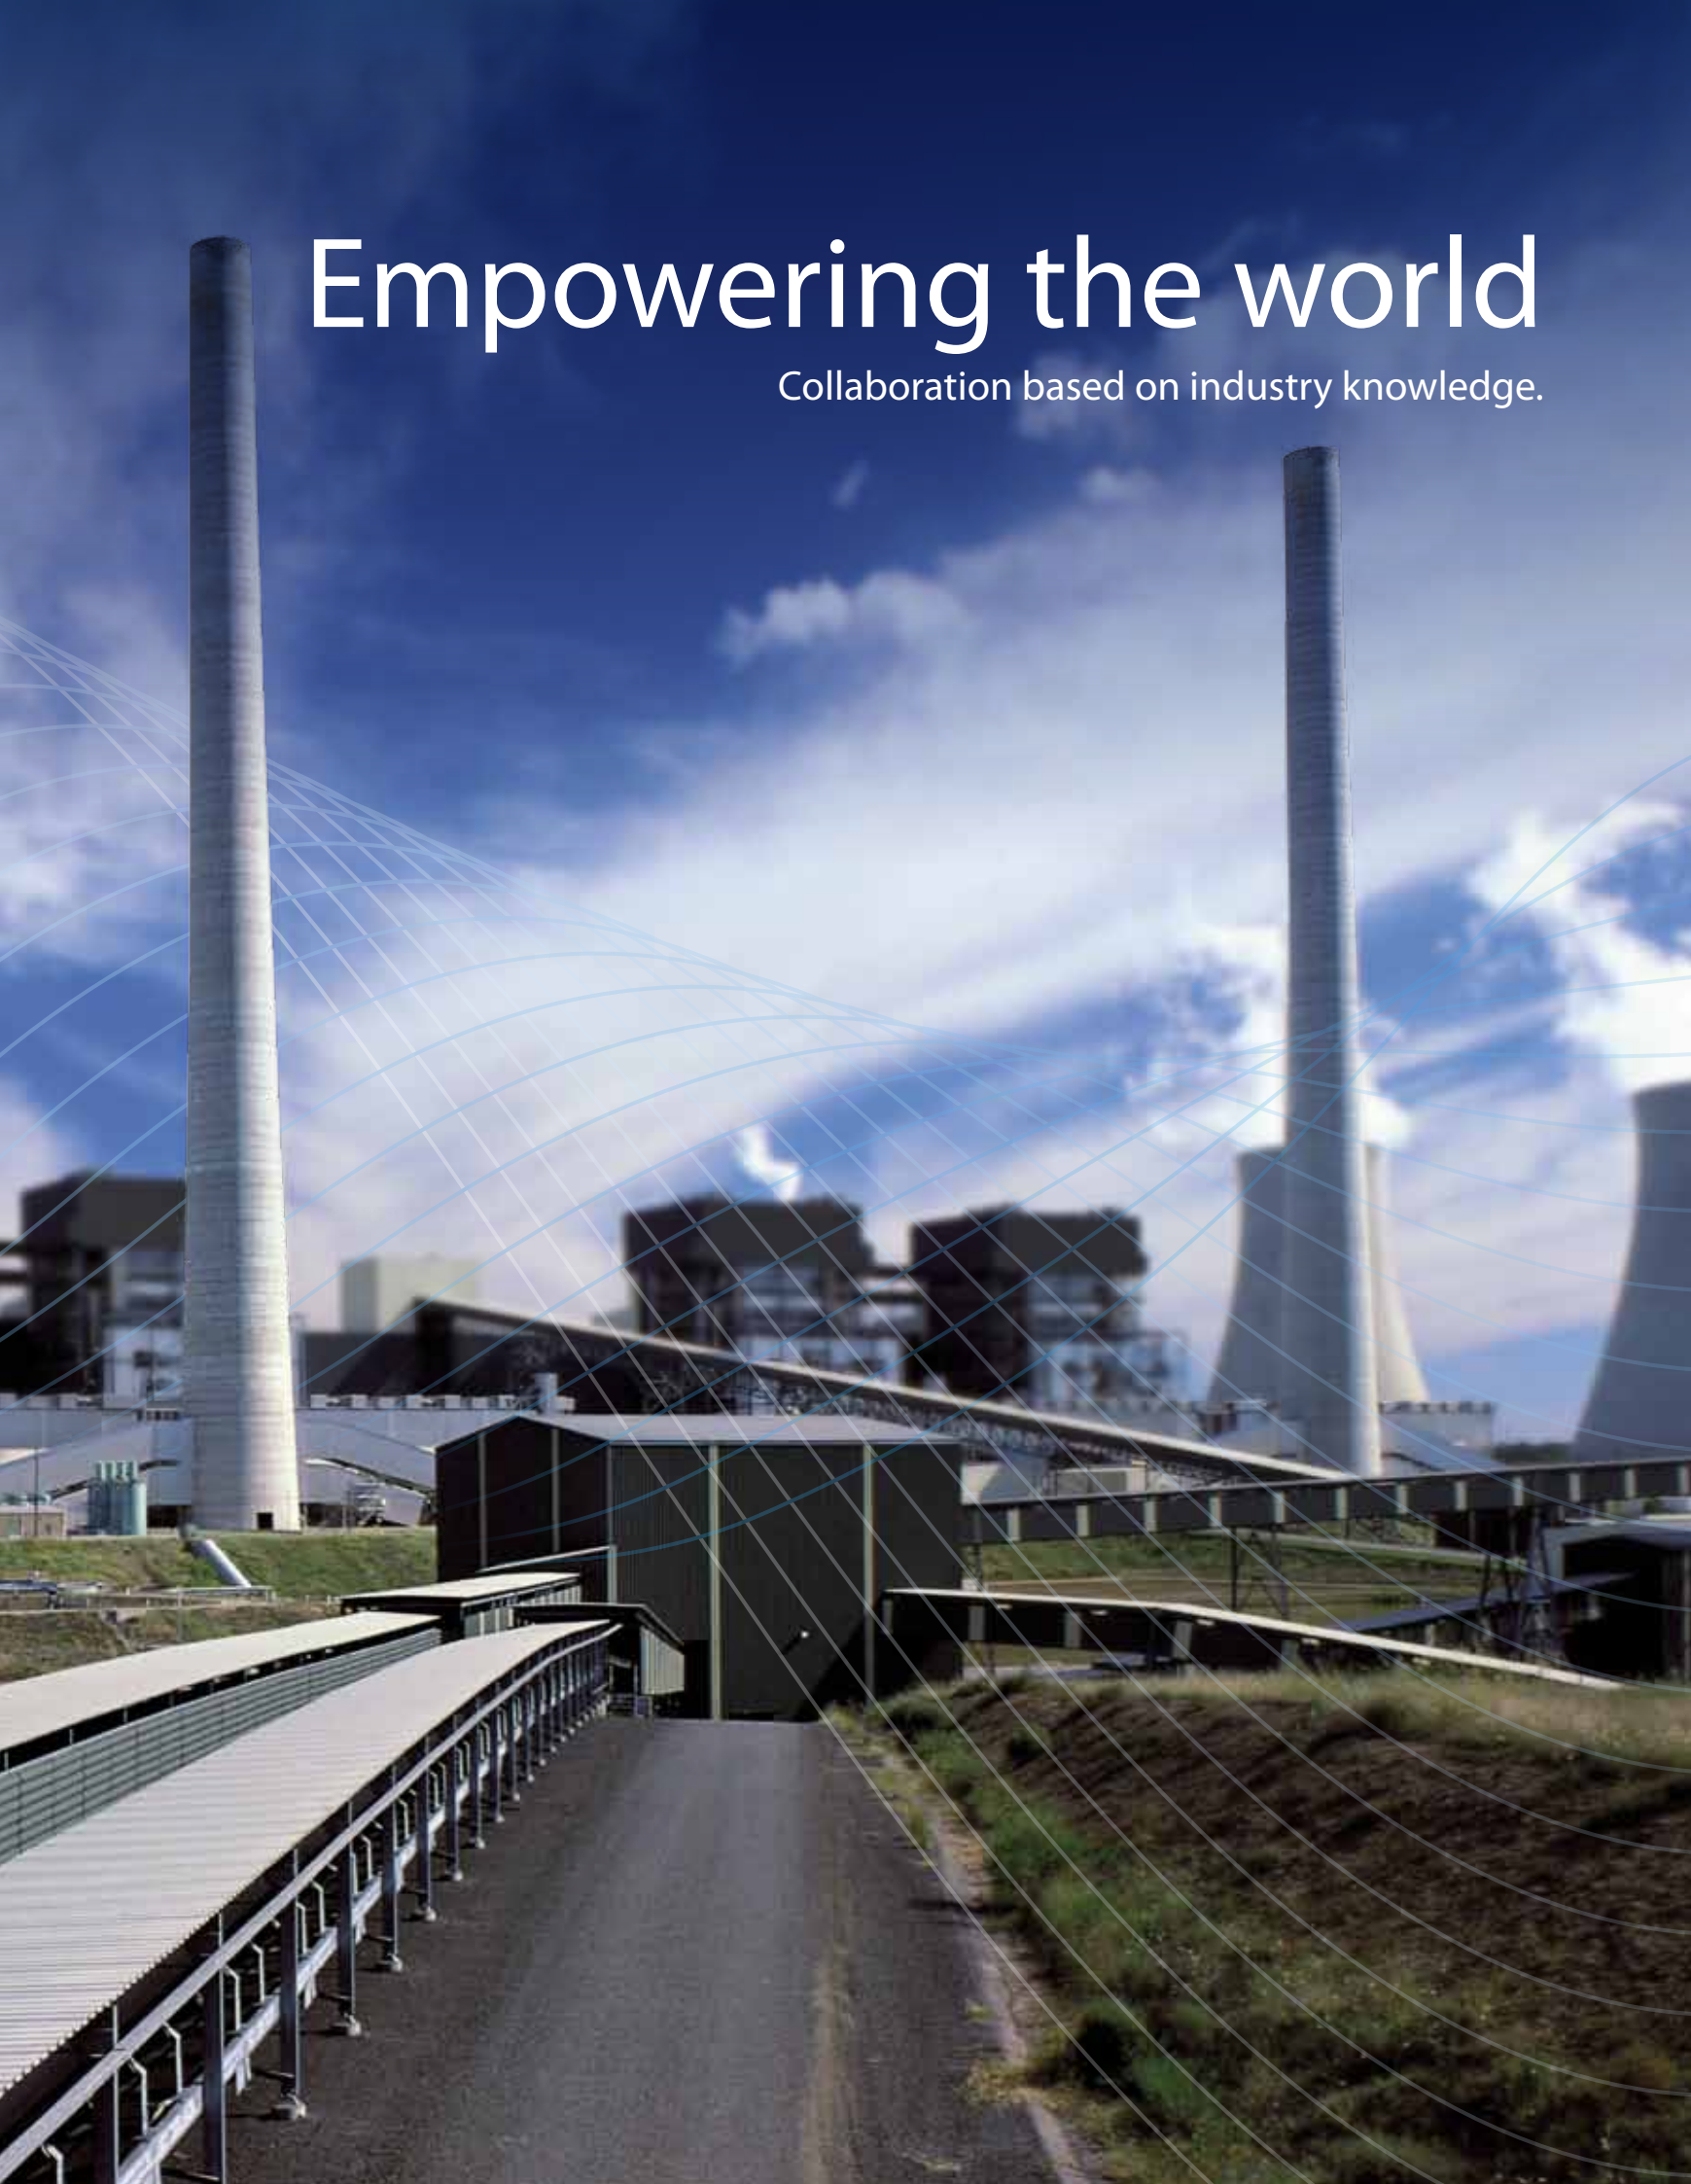

Doug Meikle
CEO of Stork Technical Services

At Stork Technical Services, partnering starts with listening. We listen to your needs, goals, desires and challenges and apply the diverse skills of more than 10,000 Stork men and women around the world to maintain and improve your installations, equipment and production lines. The result? Reduced risk and complete reliability. Your needs are what matters to Stork Technical Services. By thinking and doing, we collaborate to ensure long term solutions for your risk management. However, we are also able to do spot project work and remain committed to your satisfaction 100 percent of the time.

Our approach has been very well received. Our asset integrity management service is delivered with the highest regard for safety, quality, continuity and profitability – on time and within budget. This has earned us the trust of leading corporations around the world.

Empowering the world

Collaboration based on industry knowledge.

A comprehensive concept

Stork Technical Services offers comprehensive, in-depth services to specific sectors like the Power industry. From generators to boilers, turbines, and flow/water cycles, we understand the industry so

we can learn assess your needs in an efficient manner and ensure that your installations operate safely, reliably and sustainably.

Innovative in efficiency

The demand for energy continues to increase, and with it comes greater and greater challenges. What was efficient yesterday may be inefficient today and even unacceptable tomorrow. At the same time, safety and sustainability requirements are becoming more demanding. Companies must strive day in day out to find the right balance between safety, sustainability and profitability, without making concessions to any of these goals.

This is where the strength of Stork lies. We do not accept any compromises when it comes to safety, and fully understand the importance of sustainable production. Equally as important, we always work towards facilitating maximum profitability for our customers. This is achieved through asset and maintenance management, which is delivered at the right time and with the right people and tools.

From policy to practice

Stork keeps its promises, not only by serving as a consultant on both a strategic and policy level, but also by excelling on the implementation level. We assemble, install, maintain, repair, redevelop, modify, relocate, replace, modernize and put into operation, whether the work involves a process installation, support system or machinery.

We make sure you are well acquainted with our consultants, technical managers, project managers, IT staff, technicians, welders and inspectors. We deliver machinery, gears, turbines, boilers and compressors and buy and lease materials and equipment.

Stork is one-stop shopping at its best. But we always offer you what you actually need.

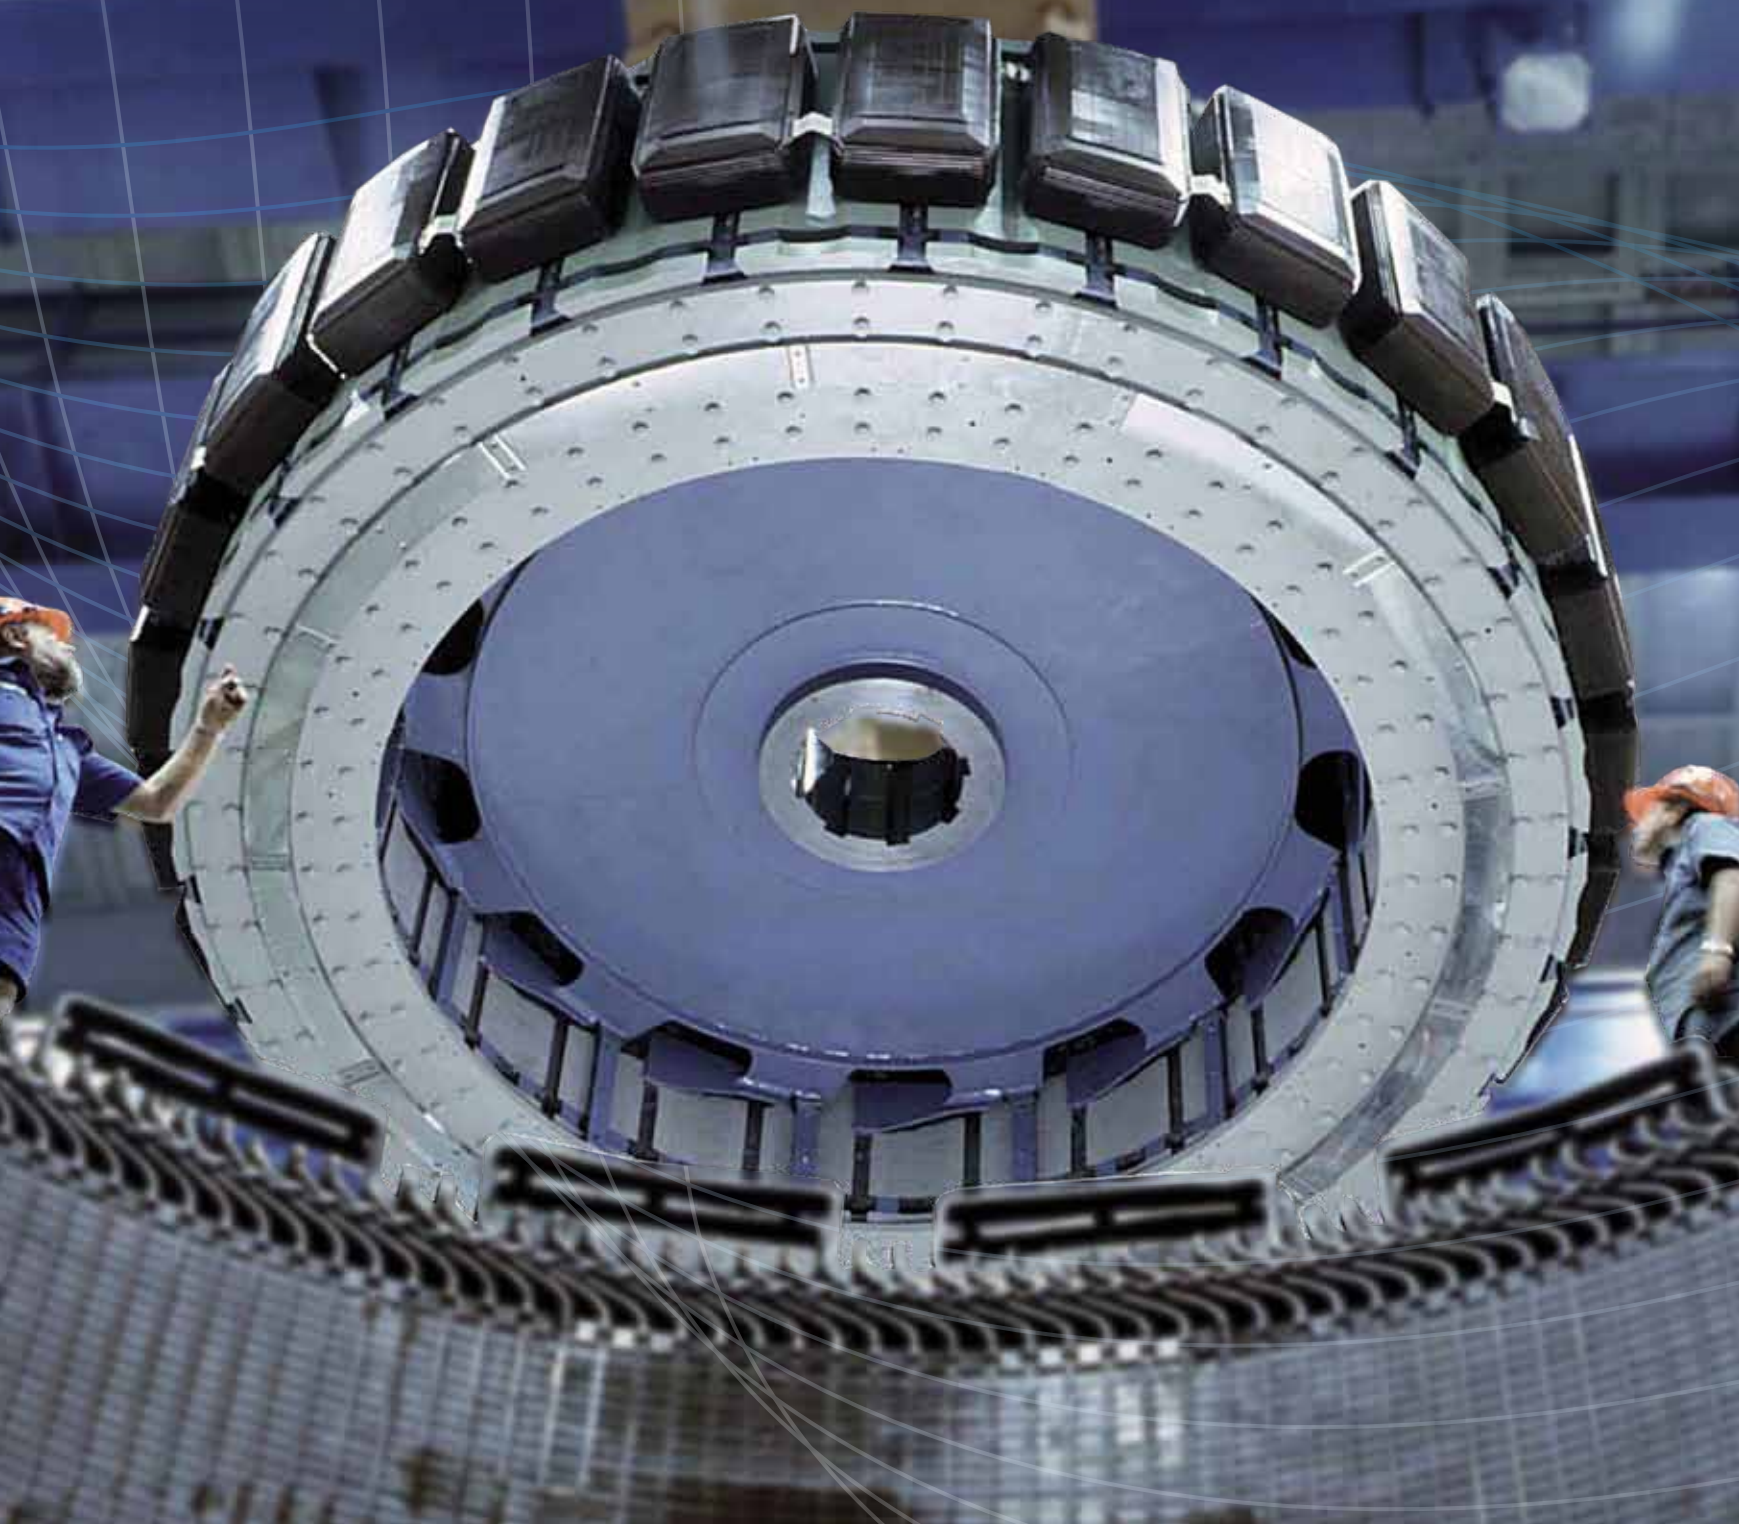

Operational Excellence

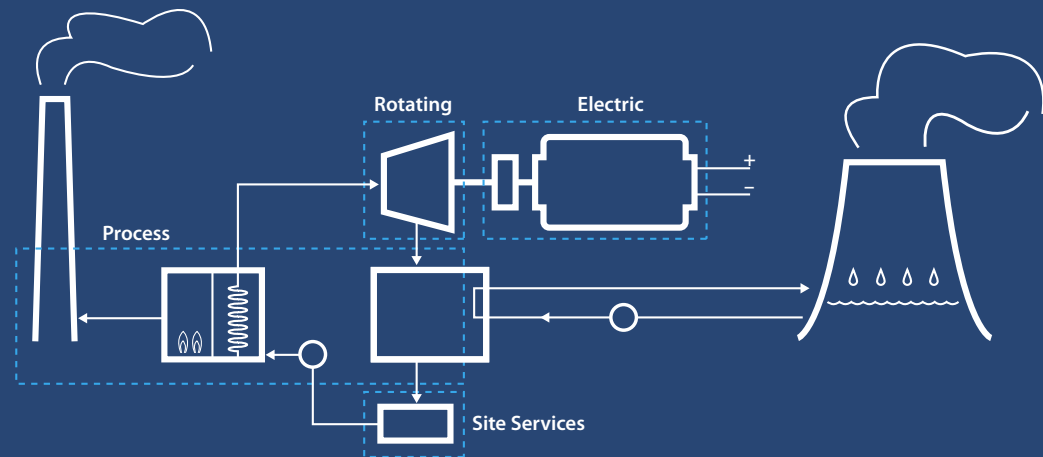

The systematic management of safety, environmental health, reliability and efficiency together result in world-class performance. That is why Operational Excellence is firmly embedded in the philosophy of Stork Technical Services.

We assign the highest priority to the health and safety of both your workers and ours. We gladly assume that responsibility and take it seriously. At Stork Technical Services, good enough is never enough.

Unity in Diversity

Stork is a broadly-oriented organization. This is clear from the fact that we have seven specific Business Lines, two regional Business Lines and thousands of employees. But as wide-ranging as we may be, there is one thing that binds together all of those units and people. Together we work towards the continuous improvement of the production facilities of organizations in highly specific industries, like the Energy sector. Naturally, this involves a wide range of specific knowledge and expertise.

Solutions

Stork Technical Services supplies a broad range of turnkey solutions for specific situations and challenges:

- **Process Equipment:** Stork serves as both an OEM and EPC supplier, effectively putting an end to the time-consuming contact that many managers have with suppliers of OEM and EPC services.
- **Electric Equipment:** We define, implement and guarantee the quality of generators, motors and other equipment that we supply.
- **Rotating Equipment:** Rotating equipment of the highest possible quality at the most competitive price possible - Stork can make it happen.
- **Site Services:** When carrying out overhauls and repairs, it is essential to follow a well thought-out plan. Stork defines and calculates the technical details of installations throughout the entire project life cycles and bases maintenance work on those specifications.
- **Inspection & Testing:** We keep a finger on the pulse of our customers' business, enabling us to maintain the highest level of integrity and reliability.

Asset Integrity

Your installations and employees are your company's most important asset. Naturally, you only want to work with highly skilled specialists trained in Project, Maintenance and Turnaround Management, as well as Relocations and Brownfield Engineering. That means working with Stork Technical Services.

What all of those services and specialities have in common is that we tailor them seamlessly and flexibly to the needs and desires of our customers. When you choose Stork Technical Services, you will be joining leading energy suppliers and industrial organizations who rely on us to fulfill a wide diversity of requirements concerning reliability, efficiency, safety, sustainability and profitability.

Asset Management and Consultancy

Whether it concerns Asset Management or Consultancy, advice does not involve thick reports intended solely for management boards. Instead, it offers clear-cut recommendations that are translated into practical maintenance processes resulting in reduced costs and risks on the shop floor, where it really matters. This leads to healthy business operations and an improved competitive position.

Our Services

What is true for our consultancy services and turnkey solutions is equally true for the products and services we deliver. This includes products like boilers, gears and turbo machinery. Stork uses experienced professionals that provide ultimate effectiveness. We are an independent organization, which means we are not required to use any specific suppliers.

● Turbo Blading

● Boiler Services

● Electric Motor

● Brownfield Engineering

● Generators

● Maintenance Management Delivery & Solutions

● Project Management Services

● Turnarounds

● Gears

● Power Trains & Transmissions

● Relocation

● Turbo Machinery

● Pumps

Lots of requirements, lots of suppliers, but only one Stork

Choosing the right boiler or machine from the huge range of options on the market, and then arranging the maintenance of all the different devices and systems is no easy task. Stork is happy to take care of all of this for you. Our services are a perfect match for all types and brands of

equipment, also because our professionals are well-versed in the specifics of these products. As we are not dependent on any one supplier, we do not offer you products that we 'happen to have in stock,' but recommend the best product for your situation.

From Brownfield Engineering to Testing...

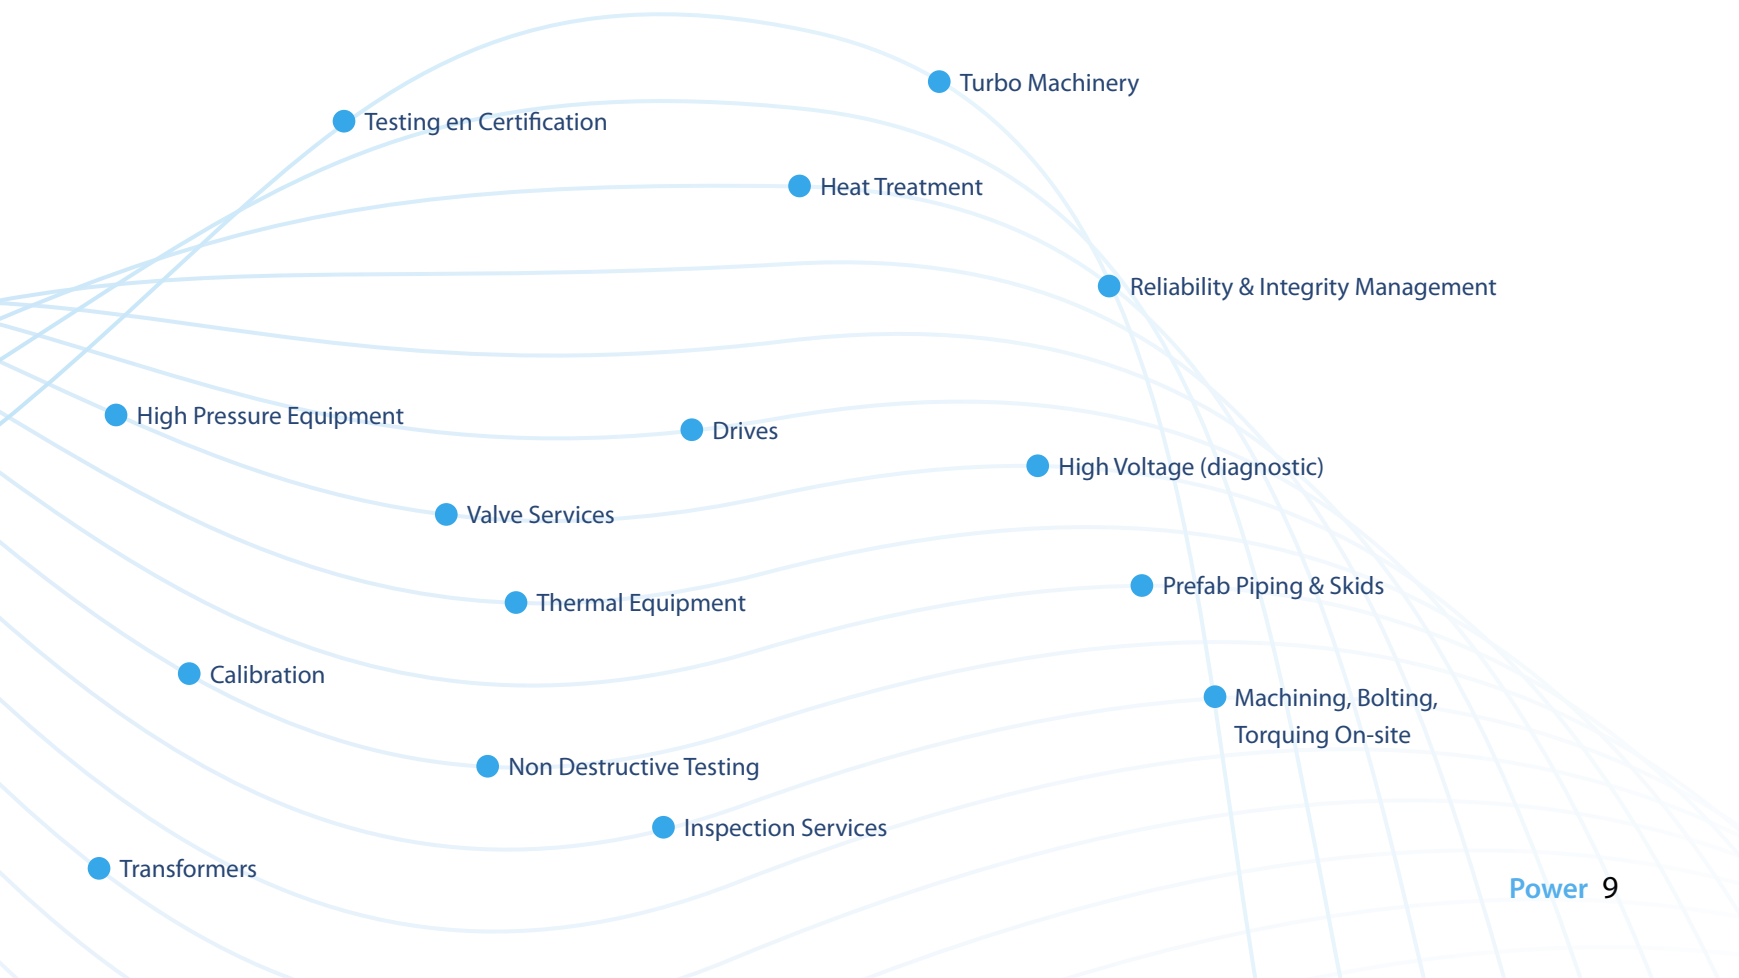

Stork Technical Services' solutions involve concrete products delivered by our Product Lines, from Brownfield Engineering and Project Management Services to Turbo Machinery, Gears

and Generators. All of these can be found under Product Lines on our website and in this brochure. We put together the right solution for your needs – anywhere in the world.

Problems? Solutions!

Whether the problem concerns a boiler, turbine, gearbox casing or generator, Stork offers a comprehensive solution. We provide tailor-made management plans that are in perfect keeping with specific requirements, whether this involves

resolving an urgent problem or ensuring long-term certainty and carefree maintenance. Our fast, reliable and professional services make asset management easy and effective. In other words, problems quickly become solutions.

Our Specialists

Our people focus on one thing: meeting or exceeding customer needs in a safe, high-quality and timely manner. That is why world-class corporations rely on us for total solutions, varying from maintenance management, consultancy and implementation to specialized services and more.

Thinking and doing

Some asset integrity management companies offer professionals to develop forward-thinking plans, while others provide skilled maintenance technicians to ensure consistent production. Stork offers both. This is what we mean by

thinking and doing. Every employee of Stork is well-trained and highly experienced to optimize industrial installations without losing sight of customer needs.

Reliable consultants

At Stork, we work with our customers, not just for them. We communicate consistently, answer questions and provide recommendations from people dedicated to the reliable integrity of your

installations. Our customer-focused culture allows us to act as reliable consultants who offer a fresh external perspective while reducing concerns about consistent, profitable production.

Years of sustainability

The involvement of highly skilled professionals results in intelligent, applicable initiatives. For example, Stork has been helping industrial companies achieve profitable sustainability for years by converting residual heat into energy. Now, however, we've taken this process an important step further by bringing

together parties, including investors, willing to purchase the residual heat from the company concerned. The role played by Stork Technical Services in this instance is that of technical engineer as well as project developer, and the project itself is carried out by results-driven Stork employees at the customer's location.
